

1) Sub component interfaces

2) wrapper interface

3) Choose an internal wiring

Note: This is just one choice of wiring

4) Implementation of Interfaces

$$S \gamma^S \rightarrow \underline{B} \gamma^{\underline{AC}}$$

$$T \gamma^T \rightarrow \underline{CD} \gamma^{\underline{B}}$$

5) Choose Components to combine

$$ST \gamma^{ST} \longrightarrow \underline{B} \gamma^{\underline{CA}} \otimes_p \underline{CD} \gamma^{\underline{B}}$$

$$\underline{BCD} \gamma^{\underline{CAB}}$$

6)
Rewire the machine
